Instructions: Windowsill Grow Kit - Kitchen Herb

STEP 1

Place the growing medium pellets in a large bowl, add 2 1/4 cups of lukewarm water. The pellets will expand as they absorb the water and turn into growing medium. Fluff the growing medium with a fork, adding more water if necessary.

STEP 2

Add 3/4 of the growing medium to the container, reserving the rest to cover the seeds.

STEP 3

This kit has three seed packets. Divide the container into 3 sections. Sprinkle no more than 10 seeds of each variety evenly over the surface of the growing medium, using only one variety per section. Save any remaining seeds for additional plantings or plant in your garden.

STEP 4

Lightly cover the seeds with the remaining growing medium.

Care:

WATERING

Use a fine mist or gently sprinkle water on top to moisten. Water daily with a fine mist to keep moist. A spray bottle is a perfect tool to water your plants. Do not over water.

LIGHT

Place in a warm, sunny location. For best results, rotate the pot often so all sides receive equal sunlight.

GERMINATION

Germination requires consistent temperature and moisture. To stimulate germination of the seeds, you can cover the pot with a piece of plastic wrap to keep the moisture content higher. Keep growing medium moist, but do not allow it to become soggy as this will cause the seeds to rot. Days to germination: Basil 7-14; Parsley 12-21; Chives 12-18

TRANSPLANTING

Depending on how many plants you have been able to grow, you want to be sure to 'thin out' the plants to give them enough space to grow in the container. Leave the 3 strongest, healthiest plants of each variety in your container. Remove all others. It is best to snip the unwanted plants with a small pair of scissors at ground level. Attempting to pull out the extra seedlings may harm the root systems of the seedlings you want to keep. Or if you desire, you may transplant the others to your garden or to a bigger pot. To transplant, moisten and carefully separate the delicate plants taking special care not to damage the stems or roots while moving. A dinner fork is a great tool to assist you in removing the seedlings. Once the remaining seedlings have reached 5" in height, transplant them to a bigger pot or to your garden (after danger of last frost has passed).

FERTILIZER

It is important to feed your plants. Use a standard plant fertilizer when your seedlings are 2"-3" in height and follow the instructions on the fertilizer packaging.
